Amstrad Mega Pc
The Mega PC is a computer manufactured and released by Amstrad in 1993 under license from Sega. It was similar but unrelated to the Sega TeraDrive. It is a standard Amstrad PC with Sega Mega Drive hardware bundled inside; the system was wired to share the dual-sync monitor and speakers with the Mega Drive on a separate circuit board.

Amstrad Mega PC - Console Gaming in an IBM-PC Compatible ...
This was a 286 PC with a Mega Drive in it, but unlike the Mega PC you could use both at once. Some games used both the PC and Mega Drive chips and the machine could be used to develop games for the MD.

Amstrad Mega PC : retrobattlestations
The Mega PC unlike the console was region free, which meant you could play JAP and US games through the computer. I have to admit, playing Mega Drive games on the Amstrad PC was a revelation at the time, especially when you consider the crystal clear VGA display!

The Amstrad Mega PC - 1992-93 - Classic Replay
Amstrad's final PC product was the unusual Amstrad Mega PC which also had a Sega Megadrive built in. Today the Amstrad PC1512 and PC1640 are quite collectible, with prices going up to £650 (€720) or so for a top-of-the-range unit in good condition. Old computers take up a lot of space, so survivors are uncommon.
