why a social and economic understanding of complex systems will help society to anticipate and confront our biggest challenges. Imagine trying to understand a stained glass window by breaking it into pieces and examining it one shard at a time. While you could probably learn a lot about each

Download File PDF A Crude

piece, you would have no idea about what the entire picture looks like.

This is reductionism -- the idea that to understand the world we only need to study its pieces -- and it is how most social scientists approach their work. In *A Crude Look at the Whole*, social scientist and economist John H. Miller shows why we

Download File

PDF A Crude

need to start looking at whole pictures. For one thing, whether we are talking about stock markets, computer networks, or biological organisms, individual parts only make sense when we remember that they are part of larger wholes. And perhaps more importantly, those wholes can take on behaviors that are

Download File

PDF A Crude

strikingly different from
that of their pieces.

Miller, a leading expert
in the computational

study of complex

adaptive systems,

reveals astounding

global patterns linking

the organization of

otherwise radically

different structures: It

might seem crude, but a

beehive's temperature

control system can help

predict market
fluctuations and a
mammal's heartbeat can
help us understand the
"heartbeat" of a city and
adapt urban planning
accordingly. From
enduring racial
segregation to sudden
stock market disasters,
once we start drawing
links between complex
systems, we can start
solving what otherwise

Download File

PDF A Crude

might be totally
intractable problems.
Thanks to this
revolutionary
perspective, we can
finally transcend the
limits of reductionism
and discover crucial
new ideas. Scientifically
founded and beautifully
written, A Crude Look
at the Whole is a
powerful exploration of
the challenges that we

face as a society. As it reveals, taking the crude look might be the only way to truly see.

I would therefore like to express my gratitude towards Royal Dutch Shell, and especially the library staff in The Hague, for allowing me
