disciplines to uncover the etiology of psoriasis. These specialists are working together to achieve a common goal: the translation of basic and clinical research data into better patient care. Included in the book are major developments in analytical tools, medical technology, and the understanding of basic biological processes at the cellular and molecular levels. Also discussed are recent advances in tissue culture and genetic chemistry as well as the details revealed by electron microscopy. Psoriasis: Proceedings of the Fourth International Symposium will interest researchers and clinicians in the fields of dermatology, genetics, cellular biology, biochemistry, epidemiology, and immunology.

This 3rd edition provides updated information on side effects of cosmetic products, topical and systemic drugs used in dermatology, and other therapeutic modalities used by dermatologists including PUVA therapy and (new in this edition) dermal implants, laser therapy, chemical face peels and cryotherapy. Because of the explosion of new knowledge since the last edition (the 2nd edition of this book was published 8 years ago), the section on cosmetics has largely been rewritten and extended, the section on side effects of systemic drugs used in dermatology has also been expanded, and the index of drugs has been made comprehensive. This book will be
