Maximum Entropy
(ME) techniques
have found
widespread
applicability in
the
reconstruction
of incomplete or
noisy data.
These techniques
have been

applied in many
areas of data
analysis
including
imaging,
spectroscopy,
and scattering
[Gull and
Skilling, 1984].
The techniques
have proven
particularly
useful in
astronomy

[Narayan and Nityanada, 1984]. In many of these applications the goal of the reconstruction is the detection of point objects against a noisy background. In this work we investigate the applicability of

ME techniques to data sets which have strong components which are periodic in space or time. The specific interest in our laboratory is High Resolution Electron Micrographs of beam sensitive materials.

techniques are of general interest for all types of data. These data may or may not have a spatial or temporal character.

Astronomy is a scientific discipline that has developed a rapid and impressive growth in Spain. Thirty years
