Philips SHC2000 Wireless Headphones are a product of mid-low range over which there is much to discuss, especially with regard to the design. Indeed, at a reasonable price in the packaging of the headphones are solid but impractical, as there is no adjustment for the measurement of the head.

Modern introduction to theory of coding and decoding with many exercises and examples.

Algebraic coding theory is a new and rapidly developing subject, popular for its many practical applications and for its fascinatingly rich mathematical structure. This book provides an elementary yet rigorous introduction to the theory of error-correcting codes. Based on courses given by the author over several years to advanced undergraduates and first-year graduated students, this guide includes a large number of exercises, all with solutions, making the book highly suitable for individual study.

This 2006 book introduces the theoretical foundations of error-correcting codes for senior-undergraduate to graduate students.

For many years, a uniform and uncontested picture of utility system organization has endured across Europe. Provider and consumer roles have been largely taken for granted, and consumers have had little choice but to use the infrastructure of the only network provider available. Recent transformations have challenged this model. This book examines the ongoing environmental restructuring of consumption and provision in energy, water and waste systems. In accounting for the distinctive environmental qualities, technical features, and institutional dynamics of utility systems this book challenges contemporary conceptualizations of consumers as the autonomous drivers of environmental change. Instead, utilities and users are positioned as the 'co-managers' of utility systems, and processes of environmental innovation are seen to depend on the systemic restructuring of demand.

In this text, Andrew Dobson argues that ecological citizenship cannot be fully articulated in terms of the two great traditions of citizenship - liberal and civic republican - and develops an original theory of citizenship, which he calls 'post-cosmopolitan'.

Essays that offer ecological, social, and political perspectives on the problem of overconsumption.

At a time of increasingly rapid environmental deterioration and climate change, sustainability is one of the most important issues facing the world. Can we create a sustainable society? What would that mean? How should we set about doing it? How can we bring about such a profound change in the way things are organized? This text tackles these questions directly. It covers: historical development of the concept of sustainability; contemporary debates about how to achieve it; and obstacles and the prospects for overcoming them. This new fully revised edition covers the latest on the climate change front, particularly the advances in scientific understanding and political awareness of climate change. Other updates include more recent economic analyses, particularly the Stern Report, and an examination of the global shift away from faith in markets and towards statism over then past five years.

In the tradition of *About a Boy* comes a feel good sports and holiday novel from #1 New York Times bestselling author Mike Lupica. Josh Cameron has it all: a World Championship ring with the Boston Celtics, an MVP award, a clean-cut image, and the adoration of millions. What he doesn't have is family. Until the day 12-year-old smartaleck Molly Parker confronts him in a parking lot and claims to be his daughter—the only daughter of Jen Parker, Josh's college sweetheart and the still the only girl he's ever loved. Trouble is, Jen Parker died last year, and now Molly has tracked down the father she never knew, the one her mother never wanted her to know about. Josh Cameron cares about two things only: himself, and basketball. The last thing this superstar wants or needs is a 12-year-old daughter. Yet this isn't just any 12-year-old. Mr. World Champion has finally met his match. “[T]his novel is . . . an enjoyable read with interesting peeks into the world of professional basketball. It will appeal to young teen sports enthusiasts as well as kids just looking for a good story.” -VOYA “Lupica delivers a winning novel, creating a realistic character in Molly. Young readers will also enjoy the look inside Josh's pampered sports-superstar world.” -Booklist “Lupica is an extraordinarily smooth writer with a great ear for witty repartee.” -Publisher's Weekly

The idea of ecological modernisation originated in Western Europe in the 1980s, gaining attention around the world by the late 1990s. At the core of this social scientific and policy-oriented approach is the view that contemporary societies have the capability of dealing with their environmental crises. Experiences in some countries demonstrate that modern institutions can incorporate environmental interests into their daily routines. Elsewhere, economic and political interests dominate development trajectories and environmental deterioration continues, challenging the premises of ecological modernisation. This volume brings together research on ecological modernisation practices around the world. Studies on Western, Central, and Eastern Europe, the USA, and Southeast Asia examine the applicability of this approach to advanced industrial countries, transitional economies and developing countries respectively. Authors critically examine the premises of ecological modernisation theory, assess its value for understanding past and present environmental transformations, and outline paths for designing future sustainable development. Taken together, the studies in collected this volume offer significant refinements, extensions and critiques of ecological modernisation theory and suggest important directions for future research on social and policy dimensions of environmental change.
