Risk Assessment Methods and

Applications carefully describes the most

relevant methods for risk assessment,

including preliminary hazard analysis,

HAZOP, fault tree analysis, and event tree

analysis. Here, each method is

accompanied by a self-

contained description as well as workflow

diagrams and worksheets that illustrate the

use of discussed techniques. Important

problem areas in risk assessment, such as

barriers and barrier analysis, human errors,

and human reliability, are discussed along

with uncertainty and sensitivity analysis.

Each chapter concludes with a listing of

resources for further study of the topic, and

detailed appendices outline main

results from probability and statistics,

related formulas, and a listing of key terms

used in risk assessment. A related website
