Redland Cambrian GRP Valley - 3m | Roofing Superstore®
GRP valley troughs are a robust, durable and lightweight alternative to lead and zinc valley. GRP valleys are manufactured from glass reinforced plastic. Roof valleys are the channels that run down the joints of the roof. They are typically metal, and seal the joints between the two faces of roofing material, generally tiles or slates, directing water to run off into the guttering. Benefits of GRP valley troughs. GRP valley troughs provide an alternative to a metal roof valley with a number ...

Tile Valleys | Roofing Superstore®

Type. Valleys. Valleys are an integral part of the average roof in the united kingdom. Valleys are made when two slopes meet creating a gully where water can flow down dispersing into a safe area. Valleys are made from a variety of materials, materials are chosen dependent on the aesthetics and the amount of water flow the valleys will incur.

heritage in roofing going back to 1919, Redland boasts an extensive range of concrete and clay tiles, in both plain and profile formats.

If you have never fixed a roof tile or slate before but have wondered how to go about repairing or replacing them, then this is the book for you. Many of the technical books about roof tiling and slating are rather vague and conveniently ignore some of the trickier problems and how they can be resolved. In *Roof Tiling and Slating*, the author rejects this cautious approach. Kevin Taylor uses both his extensive knowledge of the trade and his ability to explain the subject in easily understandable terms, to demonstrate how to carry out the work safely to a high standard, using tried and tested methods. Topics covered: considers the various types of tiles, slates and roofing materials on the market and their uses, how to estimate the required quantities, and where to buy them; discusses how to check and assess a roof and how to identify and rectify problems; describes how to efficiently 'set out' roofs from small, simple jobs to larger and more complicated projects, thus making the work quicker, simpler and neater; examines the correct and the incorrect ways of installing background materials such as underlay, battens and valley liners; explains how to install interlocking tiles, plain tiles, and artificial and natural slates; covers both modern and traditional methods and skills, including cutting materials by hand without the assistance of power tools; provides invaluable guidance on repairs and maintenance issues, and highlights common mistakes and how they can be avoided.

Read Book Redland Roofing Guide Grp Valleys

As the need to slow climate change becomes increasingly urgent, growing numbers of people are looking to dramatically reduce the carbon footprint of their own buildings by using more ecologically sound techniques. Ecohouse provides design information about the latest low-impact materials and technologies, showcasing the newest and best 'green' solutions with international case studies demonstrating sustainable design in action around the world. This edition has been expanded to include advice on powering ecohouses using renewable energy - including wind, micro hydro and heat pumps - and an introduction to low-impact building materials such as lime, earth and hemp. New case studies from across the globe have been added to inspire readers with real-life examples of how to make an ecohouse work.

This new textbook provides a comprehensive introduction to every aspect of the technology of low-rise construction. It includes sub-structure (site work, setting out and foundations) and superstructure (flooring, roofs, finishes, fittings and fixtures). The material here covers the first year course requirement of all courses on which construction technology is taught - no matter what the ultimate qualification. It offers tried and tested solutions to a range of construction problems and is organised following the sequence of construction. It will show what has been done in the past, demonstrating good practice - what works and what

doesn't - and common faults. There are summaries of the more important BSI documents and reference to the latest building regulations. Lengthy explanations are avoided by relying heavily on hundreds of illustrations, pairing detail drawings with clear photographs to show real life construction situations. The supporting spreadsheet referred to in the book can be found at this link http://www.blackwellpublishing.com/pdf/fleming/Fleming_spreadsheet.xls

In *Wind Turbine Syndrome: A Communicated Disease*, Simon Chapman and Fiona Crichton explore the claims and tactics of the anti-windfarm movement, examine the scientific evidence, and consider how best to respond to anti-windfarm arguments. This is an eye-opening account of the rise of the anti-windfarm movement, and a timely call for a more evidence-based approach.
