Science is rightly a fundamental part of primary school education, but that doesn't make it easy to teach - especially for teachers without a science background. This straight talking book from an experienced science writer and communicator looks at how to make the most of it and give primary school children a good grounding in the topic. Getting Science sets out to engage the sense of wonder. The science in this book is not for the children, but for the adults who have to explain it. Starting with a whirlwind tour of the great milestones of modern science, Getting Science goes on to take each of the main curriculum topics and give it a new twist. It provides the information needed to understand the key topics better and be able to put them across with enthusiasm and energy. This book will help teachers to get children excited by science, to understand science rather than just answer questions. Getting Science makes science fun, approachable and comprehensible to those who just don't get it.

Offers middle and high school science teachers practical advice on how they can teach their students key concepts while building their understanding of the subject through various levels of learning activities.

SCIENCE IS A GREAT AREA TO TEACH, BECAUSE CHILDREN HAVE A NATURAL CURIOSITY ABOUT THE WORLD. THEY WANT TO KNOW WHY AND HOW THINGS WORK, WHAT

This guide is divided into four sections comprising 28 peer-reviewed chapters. It covers general assessment topics and traditional and alternative assessment techniques. A series of how-to assessment practices utilized in the field and practical tips to enhance assessment in the college science classroom are included.

A Teacher's Guide to Science and Religion in the Classroom provides practical guidance on how to help children access positive ways of thinking about the relationship between science and religion. Written for teachers of children from diverse-faith and non-faith backgrounds, it explores key concepts, identifies gaps and common misconceptions in children's knowledge, and offers advice on how to help them form a deeper understanding of both science and religion. Drawing on the latest research as well as the designs of successful workshops for teachers and for children, there are activities in each chapter that have been shown to help children understand why science and religion do not necessarily conflict. The book highlights children's interest in the so-called "Big Questions" that bridge science and religion and responds to the research finding that most children are missing ideas that are key to an explanation of why science and religion can be harmonious. The book explores key concepts and ideas including: Nature of science Power and limits of science Evolution, genes and human improvement Miracles, natural disasters and mystery Profiles of scientists, including Galileo and Newton A Teacher's Guide to Science and Religion is an essential companion for preservice and practising teachers, providing session plans and pedagogic strategies, together with a cohesive
