As for many TEAC cassette recorders, the V-8030S is likely to use a mechanism sourced from Alpine - TEAC's core business was reel-to-reel, not cassette. Teac took some four years before developing its very own CD mechanism (the famed VRDS, after the 1983 NEC and 1984/85 Sony outsourcing) ...

PINEAPPLE DESIGNED LINED JOURNAL NOTEBOOK IS NOW AVAILABLE! This gorgeous journal notebook is cram packed with a ton of funky black and white pineapples on a light blue background. It's a handy size and measures 6 inches by 9 inches with 120 journal lined pages. Great for note taking, list making, brainstorming ideas, doodling, planning and more. It's ideal for the office, to keep at home, for university, school or college, by your bedside, when travelling, on your holidays, in your bag or tote etc. It has plenty of room for writing down your plans, thoughts, ideas, inspirations, dreams and more! It would make a great gift for someone, or just go ahead and treat yourself. We have lots more professionally designed notebooks, journals and planners, (including other Pineapple Designs), just search for BohoJack Press. Handy size Journal Notebook measuring 6 x 9 inches, great to fit in your bag or tote Each journal style lined page has plenty of room for all your notes Beautifully illustrated pineapple designed cover, with a glossy stay clean finish 120 pages made of great quality white paper with black print A great gift idea for your partner, a relative, a friend, a co-worker, your Sister, or just treat yourself! A wonderful gift for Mother's Day, Easter, a Birthday, Christmas, Graduation, or any other special occasion

Cooking involves chemical reactions that can make food smell and taste better. However, the same process that is responsible for creating the aroma, flavor, palatability, color, and taste of grilled and seared foods has also been linked to the development of chronic degenerative diseases. The Maillard reaction produces advanced glycation end product

Cold Plasma in Food and Agriculture: Fundamentals and Applications is an essential reference offering a broad perspective on a new, exciting, and growing field for the food industry. Written for researchers, industry personnel, and students interested in nonthermal food technology, this reference will lay the groundwork of plasma physics, chemistry, and technology, and their biological applications. Food scientists and food engineers interested in understanding the theory and application of nonthermal plasma for food will find this book valuable because it provides a roadmap for future developments in this emerging field. This reference is also useful for biologists, chemists, and physicists who wish to understand the fundamentals of plasma physics, chemistry, and technology and their biological interactions through applying novel plasma sources to food and other sensitive biomaterials. Examines the topic of cold plasma technology for food applications Demonstrates state-of-the-art developments in plasma technology and potential solutions to improve food safety and quality Presents a solid introduction for readers on the topics of plasma physics and chemistry that are required to understand biological applications for foods Serves as a roadmap for future developments for food scientists, food engineers, and biologists, chemists, and physicists working in this emerging field

Metallic nanoparticles display fascinating properties that are quite different from those of individual atoms, surfaces or bulk materials. They are a focus of interest for fundamental science and, because of their huge potential in nanotechnology, they are the subject of intense research effort in a range of disciplines. Applications, or potential applications, are diverse and interdisciplinary. They include, for example, use in biochemistry, in catalysis and as chemical and biological sensors, as systems for nanoelectronics and nanostructured magnetism (e.g. data storage devices), where the drive for further miniaturization provides tremendous technological challenges and, in medicine, there is interest in their potential as agents for drug delivery. The book describes the structure of metallic nanoparticles, the experimental and theoretical techniques by which this is determined, and the models employed to facilitate understanding. The various methods for the production of nanoparticles are outlined. It surveys the properties of clusters and the methods of characterisation, such as photoionization, optical spectroscopy, chemical reactivity and magnetic behaviour, and discusses element-specific information that can be extracted by synchrotron-based techniques such as EXAFS, XMCD and XMLD. The properties of clusters can vary depending on whether they are free, deposited on a surface or embedded in a matrix of another material; these issues are explored. Clusters on a surface can be formed by the diffusion and aggregation of atoms; ways of modelling these processes are described. Finally we look at nanotechnology and examine the science behind the potential of metallic nanoparticles in chemical synthesis, catalysis, the magnetic separation of biomolecules, the detection of DNA, the controlled release of molecules and their relevance to data storage. The book addresses a wide audience. There was a huge development of the subject beginning in the mid-1980s where researchers began to study the properties of free nanoparticle and models were developed to describe the observations. The newcomer is introduced to the established models and techniques of the field without the need to refer to other sources to make the material accessible. It then takes the reader through to the latest research and provides a comprehensive list of references for those who wish to pursue particular aspects in more detail. It will also be an invaluable handbook for the expert in a particular aspect of nanoscale research who wishes to acquire knowledge of other areas. The authors are specialists in different aspects of the subject with expertise in physics and chemistry, experimental techniques and computational modelling, and in interdisciplinary research. They have collaborated in research. They have also collaborated in writing this book, with the aim from the outset of making it is a coherent whole rather than a series of independent loosely connected articles. \* Appeals to a wide audience \* Provides an introduction to established models and techniques in the field \* Comprehensive list of references
