The 11th edition of Zoology continues to offer students an introductory general zoology text that is manageable in size and adaptable to a variety of course formats. It is a principles-oriented text written for the non-majors or the combined course, presented at the freshman and sophomore level.

Parasitology provides all the basic principles of this increasingly studied subject, emphasised by specific, but important examples rather than covering organisms of just one particular group. It is ideally suited to the new modular /semester system now used by most universities and is laid out in the form of 'notes' (rather than detailed descriptions), accompanied by simple flow charts and diagrams. Each chapter begins with a list of keywords and concepts. Where appropriate data from research papers is used to illustrate and emphasise the points.

This is a principles-orientated introductory zoology text for non-majors or combined majors/non-majors (freshman-sophomore level). Topics include biological principles, cell division and inheritance, ecological perspectives, and animal-like protista and animalia.

Animal Behavior, Second Edition, covers the broad sweep of animal behavior from its neurological underpinnings to the importance of behavior in conservation. The authors, Michael Breed and Janice Moore, bring almost 60 years of combined experience as university professors to this textbook, much of that teaching animal behavior. An entire chapter is devoted to the vibrant new field of behavior

and conservation, including topics such as social behavior and the relationship between parasites, pathogens, and behavior.

Thoughtful coverage has also been given to foraging behavior, mating and parenting behavior, anti-predator behavior, and learning. This text addresses the physiological foundations of behavior in a way that is both accessible and inviting, with each chapter beginning with learning objectives and ending with thought-provoking questions. Additionally, special terms and definitions are highlighted throughout. Animal Behavior provides a rich resource for students (and professors) from a wide range of life science disciplines. Provides a rich resource for students and professors from a wide range of life science disciplines Updated and revised chapters, with at least 50% new case studies and the addition of contemporary in-text examples Expanded and updated coverage of animal welfare topics Includes behavior and homeostatic mechanisms, behavior and conservation, and behavioral aspects of disease Available lab manual with fully developed and tested laboratory exercises Companion website includes newly developed slide sets/templates (PowerPoints) coordinated with the book

Advances in Physiological Sciences, Volume 15: Reproduction and Development covers the proceedings of the symposia of the 28th International Congress of Physiology. The book discusses several studies related to reproduction and development. The opening chapter discusses findings in reproductive neuroendocrinology, while the second chapter covers stimulatory and inhibitory analogs of LH-RH. The succeeding chapters are organized into four parts based on the topic of the papers. Part 1 deals with the role of the hypothalamus in the regulation of LH and FSH secretion, and Part 2 tackles gonadotropic and steroid hormone receptors. Part 3 explains reproduction and development, and Part 4 deals with contraception. Researchers and professionals concerned with reproduction and development will find this book a great reference materials.
