According to classical physics, "reality" takes place in a product space $R^3 \times R$, where R^3 represents space and R represents time. The notions of space and time are axiomatic in classical physics, meaning that they do not deserve a definition. (In relativistic physics, the notions of space and time are intermingled, and one

The new 'classical' mechanics which includes kinematics according to special relativity, satisfactorily explains many observed phenomena, including the Michelson-Morley experiment that indicated that the speed of light as measured in an inertial frame does not depend on its state of motion.
