The bipolar lead in the  
right atrium will  
perform both sensing  
and pacing function. In  
the RV, the tip  
electrode functions as

These adverse effects of RVA pacing on cardiac structure and function are common to all ventricular pacing modes and are independent of atrioventricular (AV) synchrony during cardiac pacing. Pacing-induced ventricular desynchronization has been linked to an increased risk of atrial fibrillation, heart failure, ventricular arrhythmias, and death
