Clinical decision making (including prescribing decisions) involves the judicious use of evidence, taking into account both clinical expertise and the needs and wishes of individual patients.

How clinical decisions are made

Clinical decision making is the process by which we determine who needs what, While not exactly arbitrary, this exercise can be quite subjective. clinician compiles their own data (hence the emphasis on learning to perform an accurate H&P) and then constructs an argument for a particular disease state based

Clinical decision-making can be defined as the process nurses use to gather patient information, evaluate that information and make a judgement which results in the provision of patient care (White et al. 1992). This process involves collecting information with the use of both scientific and intuitive assessment skills.

Patient Centered Study Guide Medical Surgical Nursing ...

Abstract The traditional style of medical decision-making in which doctors take sole responsibility for treatment decisions is being challenged. Attempts are being made to promote shared decision-making in which patients are given the opportunity to express their values and preferences and to participate in decisions about their care.
