Cormen Exercise Solution

Welcome to my page of solutions to "Introduction to Algorithms" by Cormen, Leiserson, Rivest, and Stein. It was typeset using the LaTeX language, with most diagrams done using Tikz. It is nearly complete (and over 500 pages total!!), there were a few problems that proved some combination of more difficult and less interesting on the initial ...

Exercise 1.2-1 Modern day global positioning devices (GPS) that provide instructions on how to get from place to place using road networks are an application that uses algorithms like discussed in this book very heavily. Exercise 1.2-2 For this exercise we want to determine the smallest value of n such that $T_{\text{mergesort}}(n) = 65n \lg(n) < 8n^2 = T$

Third Edition Getting Started. This website contains nearly complete solutions to the bible textbook -

Clrs Solution

So, the problem asks for a search algorithm and we already know binary search is an efficient one at that which runs at $\Theta(\lg n)$ time for a sorted array (see Exercise 2.3-5).. So, we can sort the array with merge sort ($\Theta(n \lg n)$) and then for each element $S[i]$ in the array, we can do a binary search for $(x - S[i])$ on the sorted array ($\Theta(n \lg n)$).
