2.2.1 THE ANALYSIS, SYNTHESIS, AND EVALUATION PARADIGM. At the most abstract level, the act of design may be considered to be that of idea formation and idea communication. Indeed, any act of the human intellect could be summarily categorized in these terms. A description of design activity at this level does not offer great insight, but can be chosen as the means with which to systematically explore the components of design and the creative process that design entails.

The task of a synthesis tool is to analyze a VHDL description and infer what hardware elements are represented and how they are connected. A tool cannot infer hardware from any arbitrarily written VHDL model. Instead, we need to write models in a synthesis style that is recognized by the tool. Style guidelines include templates for process statements from which various kinds of hardware elements can be inferred, and restrictions on the way in which we write and combine statements.
