Conclusion- This lab was an extension on the buggy lab because we moved from the buggy traveling on a flat surface at a constant velocity to a cart moving down the ramp. Instead of moving at a constant velocity, the data from both the motion sensor and the video analysis shows that the cart was accelerating.

Cart on a Ramp Lab

It is in the laboratory that physics students learn to practice the activities of scientists - asking questions, performing procedures, collecting data, analyzing data, answering questions, and thinking of new questions to explore.

Free-Fall Laboratory Investigate the motion of an object as it falls to the ground. A variety of objects can be compared, and their motion can be observed in a vacuum, in normal air, and in denser air. The position, velocity, and acceleration are measured over time, and the forces on the object can be displayed.
