## **Concepts**

A lens is a transparent device with two curved surfaces, usually made of glass or plastic, that uses refraction to form an image of an object. Mirrors, which have curved surfaces designed to reflect rays, also form images. A system of lenses and/or mirrors forms an image by gathering rays from an object and then

virtual or real. According to Georgia State University, virtual images are formed at the location where the paths of the primary light rays intersect when projected backward from their direction beyond a lens. A real image is formed where the light originally converges. Mirrors reflect light and create images in a way similar to a lens, depending on
