Solution: Let $\epsilon > 0$ be given, and consider for each $x \in K$ the set $B(x, \epsilon)$. This is clearly open since it is an open ball. Also note that $\{B(x, \epsilon) : x \in K\}$ is an open cover of K . Since K is compact, we have that this open cover has a finite subcover, and so there exists a finite set $T \subset K$ such that $K \subset \bigcup_{x \in T} B(x, \epsilon)$: Thus, we have that K is totally bounded.

Let x be a real number. If $x < \epsilon$ is true for all real numbers $\epsilon > 0$, then $x = 0$. This statement is the general idea of what we do in analysis. Suppose next we really wish to prove the equality $x = 0$. In analysis, we prove two inequalities: $x > 0$ and $x < 0$. To prove the inequality $x > 0$, we prove $x > \epsilon$ for all positive ϵ .

This free online textbook (OER more formally) is a course in undergraduate real analysis (somewhere it is called "advanced calculus"). The book is meant both for a basic course for students who do not necessarily wish to go to graduate school, but also as a more advanced course that also covers topics such as metric spaces and should prepare students for graduate study.
