Ear infections are common in children, but are less common in adults. If you develop an infection in one ear and you haven't had ear infections in the past, it's important to have a specialist examine your nasopharynx. This is especially true if you don't have an upper respiratory tract infection (like a "cold") along with the ear infection.

Neoplasia of the ear represents a very small portion of the otic disorders of cats. Tumors can arise from any of the normal structures of the ear. The pinna and the external ear canal are affected more commonly than the middle and inner ear. Neoplasms spanning all three tumor types are found in the feline ear.

## **Tumors of the Ear | Veterian Key**

Tumors of the ear canal are abnormal growths that can develop from any part of the ear canal (the skin, the glands of the skin that produce earwax and oil, and the underlying connective tissues, muscles, and bones). Ear canal tumors can be benign or malignant. Benign tumors do not spread, while malignant or cancerous tumors can spread to the surrounding tissues or even other areas of the body ( metastasis ).

An acoustic neuroma (schwannoma) is a benign tumor that develops on the balance and hearing nerves leading from your inner ear to the brain. These nerves are twined together to form the vestibulocochlear nerve (eighth cranial nerve). The pressure on the nerve from the tumor may cause hearing loss and imbalance.

### **Brain tumor - Symptoms and causes - Mayo Clinic**

Because these brain tumors often press on a balance nerve, they can cause symptoms related to balance and hearing, including:

Unilateral hearing loss: This means you have hearing loss on one side. If you notice that you tend to talk on the phone with a certain ear, that may be a sign of hearing loss in the other ear.
